

## **Action Plan report France**

First we organised some presentations to explain lots of things about our subject: environment. We presented to our classmates the resolutions that we took and that we want to spread in our school and beyond. During this presentations the students were really interested and motivated to apply our tips that we learned in Trogen, during the forum. We decided to suggest also one menu for the people who don' t eat meat. Because before if you are vegetarian you have to just eat vegetables. Now they can choose between different kind of vegetables and they can took fish. Finally our last resolution is about recycling in the canteen.

Moreover we did the strike against the global warming to prove our engagement for this mouvement.

We tried our best to respect all of our promises, that we approach during the EYFT19, even some tings are not like we thought, we are proud to involve our school system in favour of environment and to raise awareness the youger students about the future of our planet.
