

Action plan

So for our action plan we decided to put parking for bicycles. This decision was caused by the fact that many students are going to school by bikes. But there are some problems with our courtyard. And the thing is, our courtyard is going to be rebuild this summer. So it is better to do it after rebuilding, approximately in September. There is a place where we are going to put our parking!

And this is how the parking will look:

Length	Height	Width	Quantity of parking slots	Price
2,60 m	50 cm	60 cm	8 slots	3500 uah

Price:

To build the parking (8 parking lots) for our school will cost 3500 uah.

Parking installation is included in the price (this company does the installation for free).

Time:

Cycling park will be installed during one day and will take approximately 1 hour or less.

Is it necessary for our school?

This parking is absolutely a great thing for our school. As there are a lot of students, who live in an area near the school but walking takes too much, such a parking will provide comfortable arriving. For someone it would be a nice opportunity to switch from the bus, car or underground to an ecological transport - bicycles.

In conclusion, cycling parking gives us two advantages:

- Students' comfort
- Environmental protection
